Evidence pack

Your personal values, a sketch you draw by hand, and a short explanation. One pack after each of Days 2 to 6.

DAY

INDEX NUMBER written without spaces or hyphens

How to use this form
Type into the boxes. Add the photograph of your sketch as a page after this form and write its page number in part 2. Save the whole pack as one PDF and submit that.

1 Your personal values

For each value the lab sheet asks for, give the step it comes from, the value itself, and how you got it. Values made from someone else's index number, or from the example in the lab sheet, score zero for this part.

Lab step	Value	How you got it

2 Your concept sketch

Draw the day's mechanism by hand, on paper, and label every part the lab sheet names. Neat drawing is not marked; correct labels are. A sketch drawn on a computer, or copied from a slide, scores zero for this part.

Paste the photograph of your hand-drawn sketch here, or add it as a page after this form.

PAGE NUMBER OF THE PHOTOGRAPH, IF ADDED AS A PAGE

3 Your explanation (120 words at most)

Answer the lab sheet's one "why" question in your own words. Simple English is fine: the ideas are marked, not the language.

4 Before you submit

Tick each line once it is true.

- [ ] Every item the lab sheet lists is present and labelled with its step.
- [ ] Every value comes from my own index number, and I show how I got it.
- [ ] The sketch is drawn by hand, photographed, and every named part is labelled.
- [ ] The explanation is my own, answers the "why", and is no more than 120 words.
